DESCRIPTION

(Note: This listing is for the Platner dining table base only. If you would like the table with that glass top, please check out our main product listing here: [MC-6501](#).)

Part of the Platner Collection, our dining table is inspired by Platner's designs from 1966 is an elegant addition to your dining room. This iconic piece features steel rods to form the curved table base. Mr. Platner, who worked in the firms of Eero Saarinen and Kevin Roche in the early and mid-1960's, introduced his collection of chairs, ottomans and tables in 1966. Known as the "Platner Collection", in the original design, each piece glass rests on a sculptural base of nickel-plated steel rods resembling a shiny sheaf of wheat. Platner designed both the structure and the production method for these designs, forming his primary contribution to the mid-century modern furniture movement and is still an enduring icon of 1960's Modernism.

While this is a very sturdy base and can hold about 250 pounds. If you are considering using for your own top, we recommend a minimum diameter of 54 inches (to have adequate leg room) and a maximum diameter of 60 inches (unless you plan on securing the top with some sort of bracket). This base is not suitable for a marble or granite top due to they weigh too much and the table can get unstable. There is a clear rubber floor protector around the base.

Dimensions:

Top Diameter: 34 inches
Bottom Diameter: 20 inches
Height: 28.75 inches
Weight: 110 lbs

WOOD CHOICES

In comparing our Platner style dining table and the one Knoll sells, there is a slight visual difference in the way we curve our base, but most people don't notice this. And the glass is pretty much the same: tempered and the bevel edge details.

However, there are some big differences in the way we construct our table base, to begin with:

- Our frame is made of stainless steel which is polished to give the shiny look. Knoll uses mild steel, and then it is chrome plated. Chrome plating does give a shinier finish, but it also is subject to bubbling and if it gets a deep scratch, there is really no way to easily fix it and depending on the depth of the scratch, the frame can rust.

- Our frame is made taller than the Knoll version. Most people prefer a table that has the modern table height of 29.5 inches. The Knoll version table height is about 28 inches, which is low in today's standards.
- Our frame is less wobbly than the Knoll version, because we have added an extra support ring at the bend. This doesn't affect the visual look of the table, but there is a noticeable improvement in the overall stability of our table compared to the Knoll version.
- We include a clear plastic ring around the bottom to prevent damage to the floor.
